

StudyCircle Analytics Feedback Paper

(08/10/2026)

Analytics

- Last session, we went over what analytics will be useful and why. I think what you already have included in the user and admin analytics are the essentials so this paper will focus more on questions and tips that would help you figure out if there's something that you're missing on the admin section.
- Analytics can help you figure out more about StudyCircle. Today's apps improve over time as developers release updates. Big websites like Facebook didn't get things perfect on the first try but they had analytics to guide them on what their user behavior is and how to improve it.
- Some questions that analytics should answer include but are not limited to:
 - What users are doing
 - When users are using
 - How users are using
 - How long users are using
 - Are they using it as intended?
- Taking a look at StudyCircle again, you have features such as Rewards (XP and Coins), Rooms, Cosmetics, Furniture, Music, Calendar etc. What you can do is ask questions about each that relate to user behavior. Then filter out which questions you think are important and which are not. For example, with regards to Rewards.
 - How fast are users earning XP and leveling up?
 - How fast are users earning Coins?
- Now think, are these questions important? Does the speed of users earning XP/Coins affect anything towards their user behavior?
 - Yes actually. Because if the users earn Coins fast, then they can acquire most if not all Cosmetics and Furniture right away which is a big part of their motivation to continue using StudyCircle.
- Now do this for the rest of your features but emphasis and priority on the major ones. Most questions you may end up forming are important but you'll need to know which ones to prioritize. For example:
 - **(High)** Do users usually finish the overall allotted time for each session?
 - This question is important and impacts a lot of factors. One is through the difference in experience between solo and groups. Let's say your

analytics for this show that solo users tend to end their study session earlier than the allotted time compared to groups.

- You can speculate that they lose focus sooner because they're alone. Maybe you can think of ways to improve that experience such as granting more XP and Coins when studying solo compared to a group so that they'll be encouraged to utilize the total allotted time for the session more.
- **(Medium)** How often do users Check-in?
 - Let's say I didn't provide my feedback last time yet. You have this analytic and you notice there's an astonishingly low rate of check-ins from all users even though the number of active users is consistently high.
 - You wonder why and realize it's because they're not aware there's a check-in feature in the first place.
 - This is something of a Medium level since it can be frustrating for users to find out late but it doesn't affect the overall experience.
- **(Low)** Which type of Music genre do the users prefer?
 - Helpful since this helps you figure out which music you can add in the future but since this StudyCircle can live without this adjustment yet, then it's considered low.
- One last thing about user behavior is that while you want your users to use StudyCircle as you designed it to be used, there are times when the users themselves are the ones who should decide. Forcing them to change when they clearly have set expectations already could end up being a disaster.
 - Take for example OnlyFans. The website was supposed to be a place where any creator (whether an artist, writer, graphic designer, etc.) can set up a subscription model for their content. It just so happened that models found it an effective website for their explicit content that it became popular as how it is today. OnlyFans tried to ban this type of content at one point which resulted in a huge backlash so they reversed it.
- In short, your analytics should help you figure out better ways to improve your users experience with StudyCircle. With its help, you can direct them to using StudyCircle more effectively and in line with your design. However, if the users established certain practices already that become part of StudyCircle's identity, then it should be something that's embraced even if it wasn't originally intended.
